

Page 1 of 6 · Flags for the Parade

Luckybug clips a small set of bright flags together for the garden parade. Flutter-Butter checks whether every flag has a partner. They decide every parade group should try marching in pairs.

Page 2 of 6 · One Without a Partner

A little team of ladybug drummers arrives. Luckybug places a pair side by side, but another drummer still waits nearby. The little drummer does not mind leading, and the friends wonder what one leftover tells them.

Page 3 of 6 · Four Fluttering Ribbons

Flutter-Butter carries a bundle of ribbons. Luckybug places them two by two until every ribbon has a partner. The paired bows can decorate both sides of the parade arch.

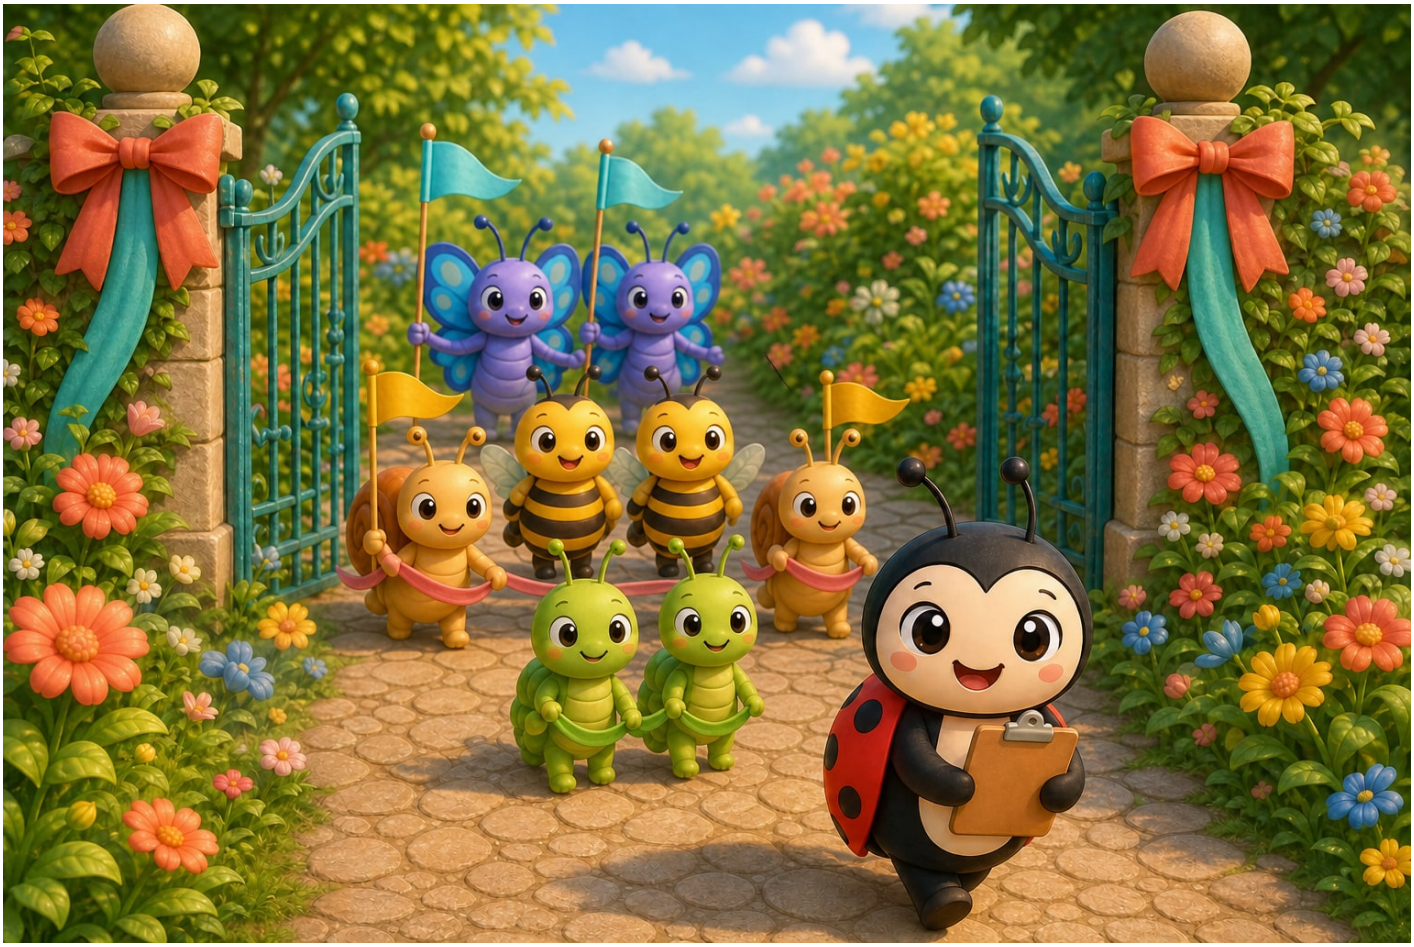

Page 4 of 6 · The Crooked Flower Row

Two flower rows line the path. One row settles into tidy pairs. The other has one bloom leaning beyond the last pair. Luckybug checks the leftovers instead of guessing from the row length.

Page 5 of 6 · The Next Parade Group

The parade board shows three growing groups, then an empty space. Luckybug taps each group while Flutter-Butter listens for the next number that can still split into pairs.

Page 6 of 6 · Everyone Belongs

The marchers reach the garden gate. Friends stand together in pairs, and Luckybug proudly leads at the front. The parade has room for pairs and leaders, and every friend belongs.

Questions for Luckybug’s Pairing Parade

Read the story together first. Use one question at each page, then the question at the end. Answers are below the dotted line: fold them under or cover them while reading.

Page 1 · Flags for the Parade

Is 2 odd or even?

Choices: Odd · Even

Page 2 · One Without a Partner

Is 3 odd or even?

Choices: Odd · Even

Page 3 · Four Fluttering Ribbons

How many pairs are in 4?

Choices: 1 pair · 2 pairs · 3 pairs

Page 4 · The Crooked Flower Row

Which number is odd?

Choices: 6 · 5 · Both

Page 5 · The Next Parade Group

What comes after 6 in this pattern?

Choices: 7 · 8 · 9

Page 6 · Everyone Belongs

Is 9 odd or even?

Choices: Odd · Even

After reading

Nine friends marched in the parade. Why did one of them walk at the front?

Answers (fold under before reading)

Page 1: Even. Two is even. Both flags have a partner.

Page 2: Odd. Three is odd. One drummer is left over.

Page 3: 2 pairs. Four makes two complete pairs.

Page 4: 5. Five is odd because one flower is left over.

Page 5: 8. Eight comes next when we count by twos.

Page 6: Odd. Nine is odd: four pairs and one leader.

After reading: Nine makes four pairs with one left over, because nine is odd. The one left over became the leader, so nobody was left out.
